Progress Check

Your Deep Learning Project V

Progress Check

Your Deep Learning Project V

Where are you at with respect to the following?

1. Splitting your data
   - training set (80% — for optimizing parameters)
   - validation set (10% — for hyperparameters)
   - test set (10% — don't touch yet!)
2. Building and assessing architecture
   - get above chance (simplifying problem, if necessary)
   - do existing performance benchmarks exist?
   - if not, use a simple architecture as benchmark

Progress Check

Your Deep Learning Project V

Recommended Projects

Your Deep Learning Project V

1. build a machine-vision architecture to classify images, e.g.:
   - [Fashion MNIST]
   - one of dozens of "image" data sets from [CrowdFlower]
   - one of the *Computer Vision* data sets from [Luke de Oliveira's post]
2. build a natural language processing architecture to classify text, e.g.:
   - Yelp or Amazon sentiment [datasets] from [Zhang et al.]
   - the Yahoo! answers categories data set from Zhang et al.
   - one of dozens of "sentiment" or "text" data sets from CrowdFlower
   - one of the *Natural Language* data sets from Luke de Oliveira's post

Recommended Projects

Your Deep Learning Project V

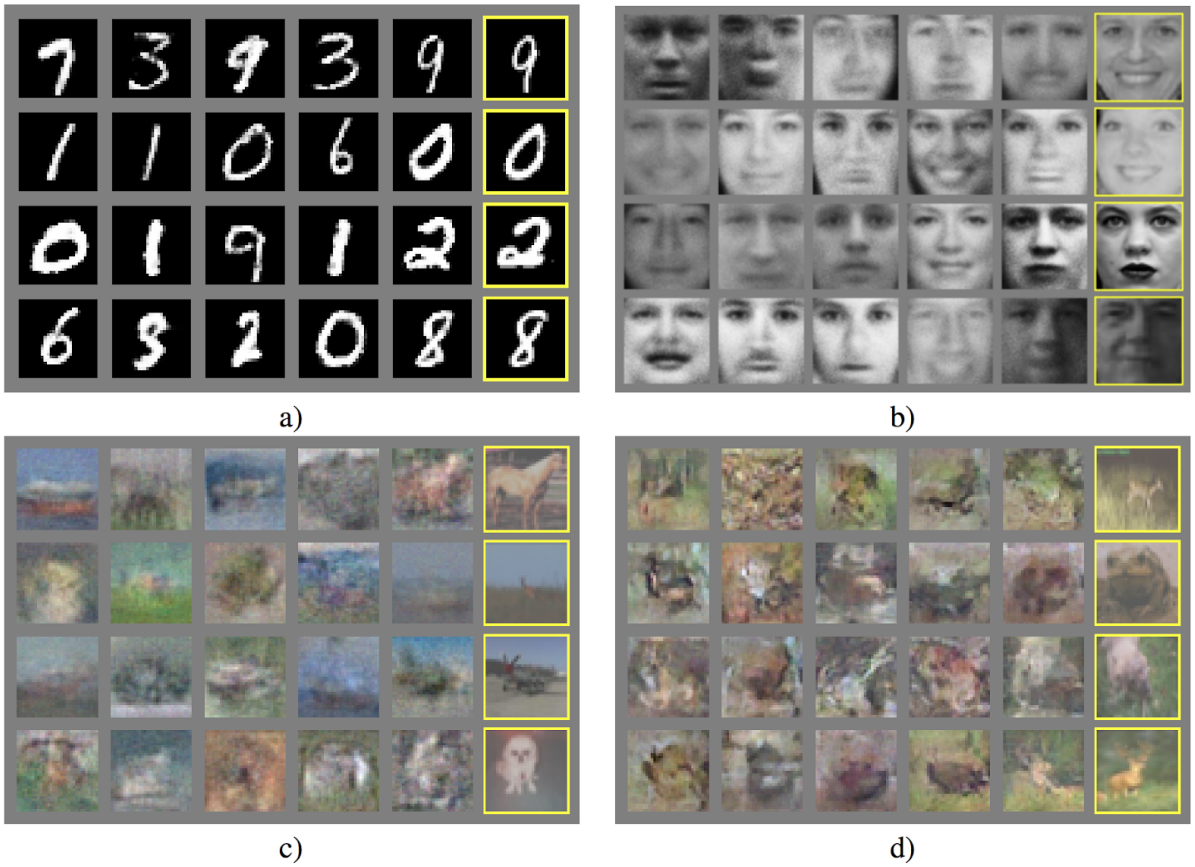
Outline

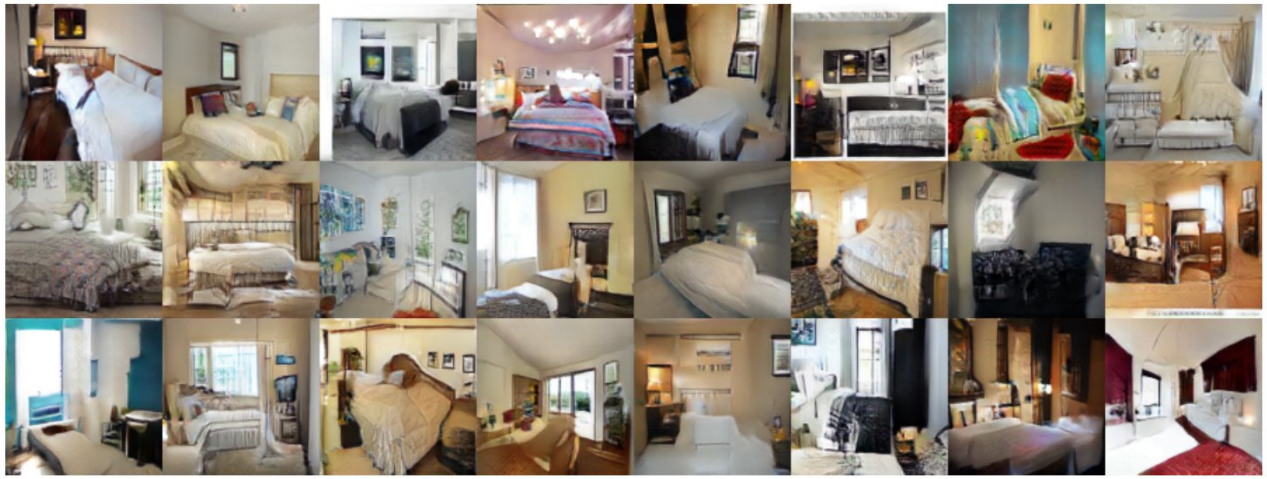
GANs

Goodfellow et al. (2014)



DCGANs

Radford et al. (2016)



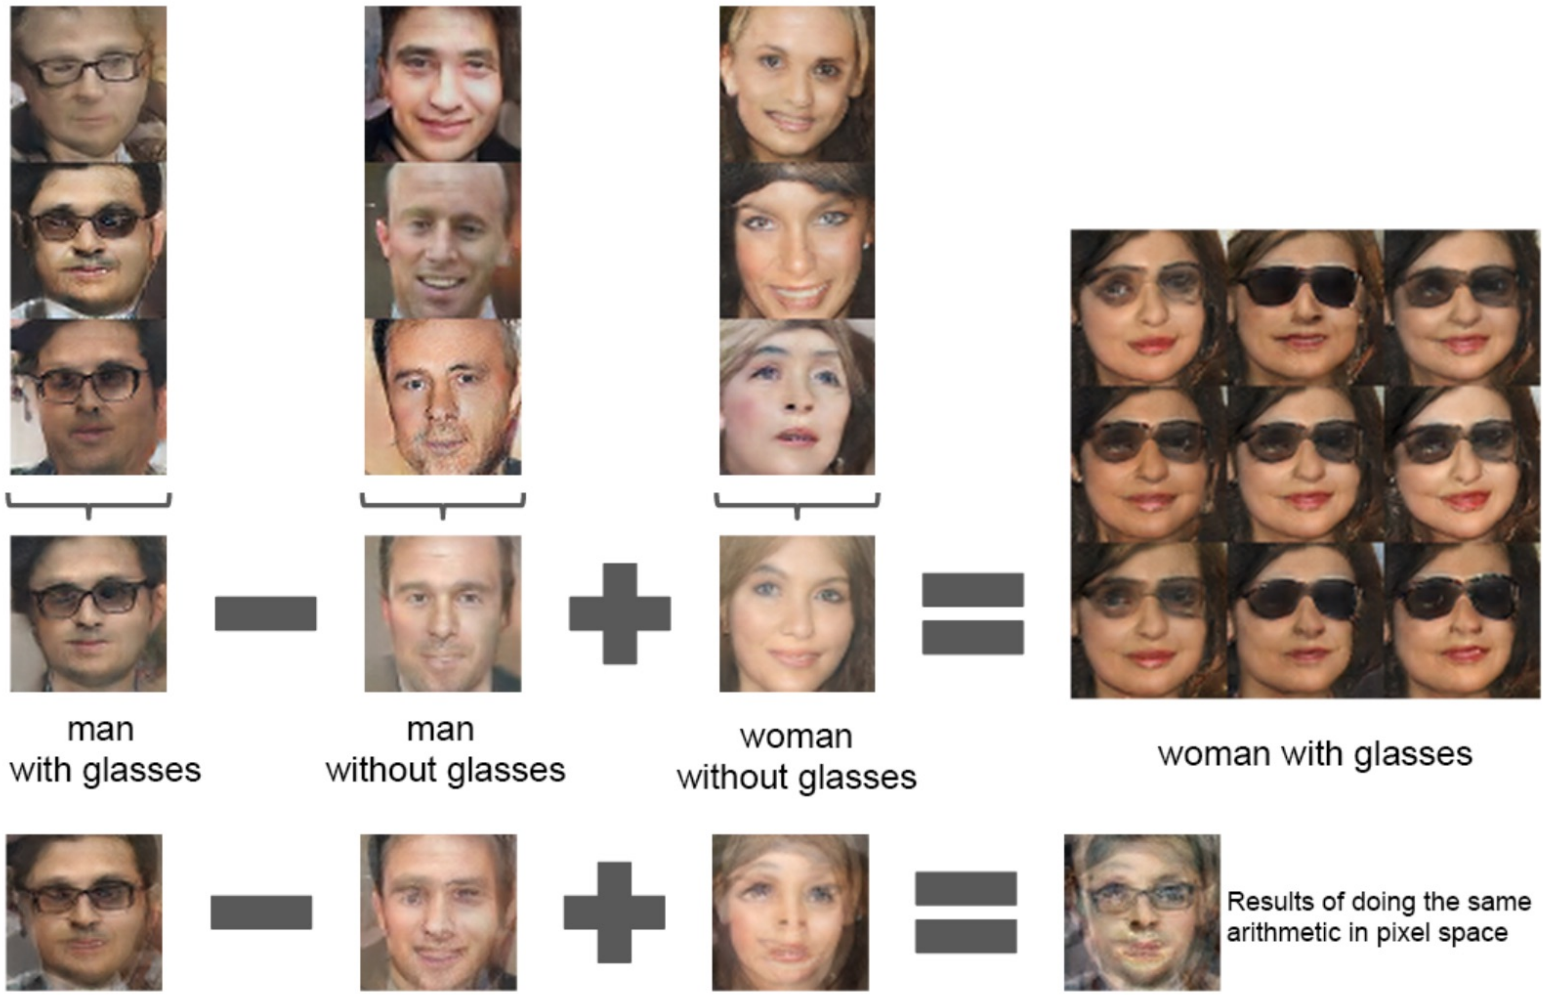
(a) Generated by LSGANs.

(b) Generated by DCGANs (Reported in [13]).

Figure 5: Generated images on LSUN-bedroom.

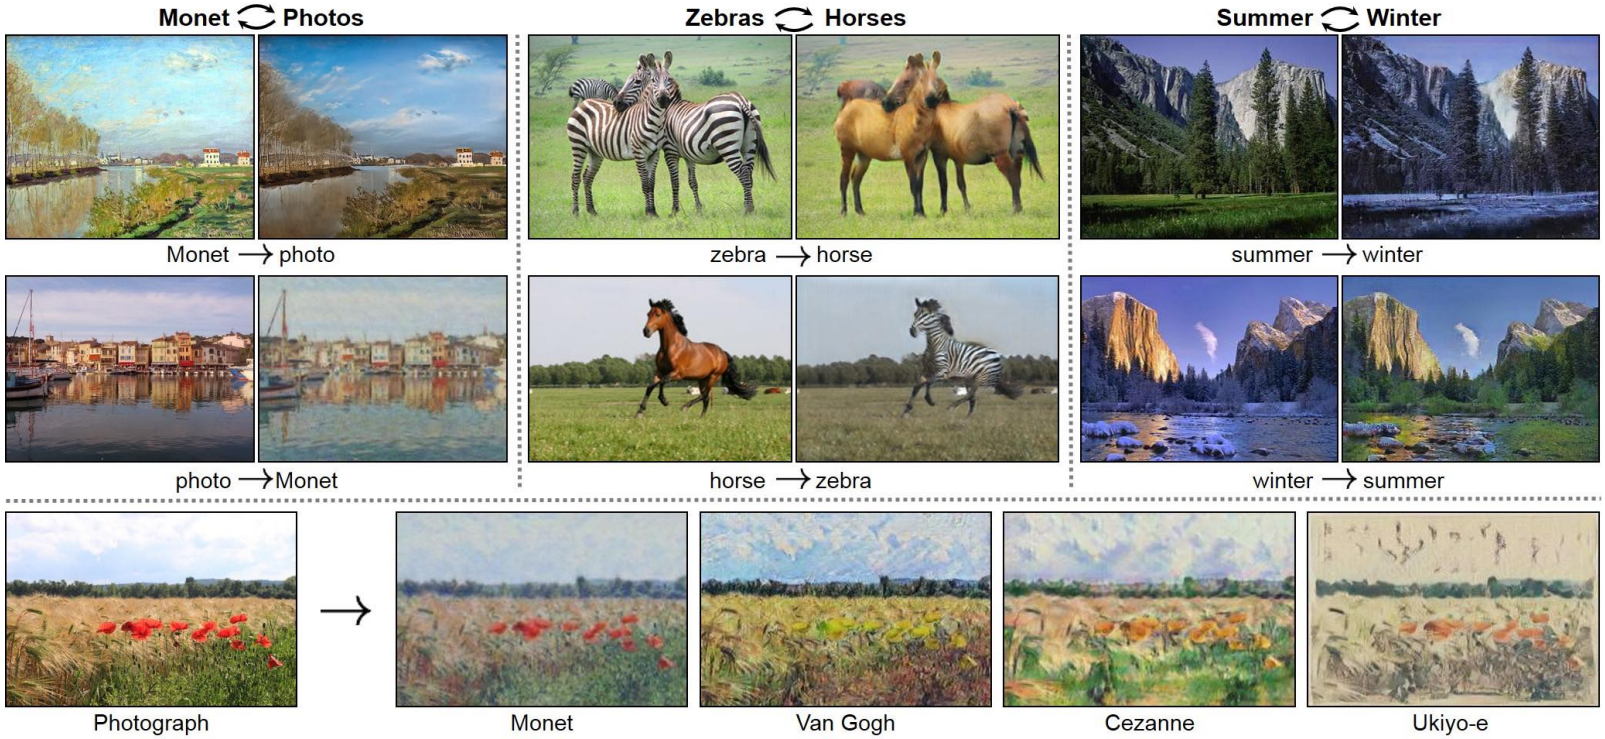
DCGANs

Radford et al. (2016)



CycleGANs

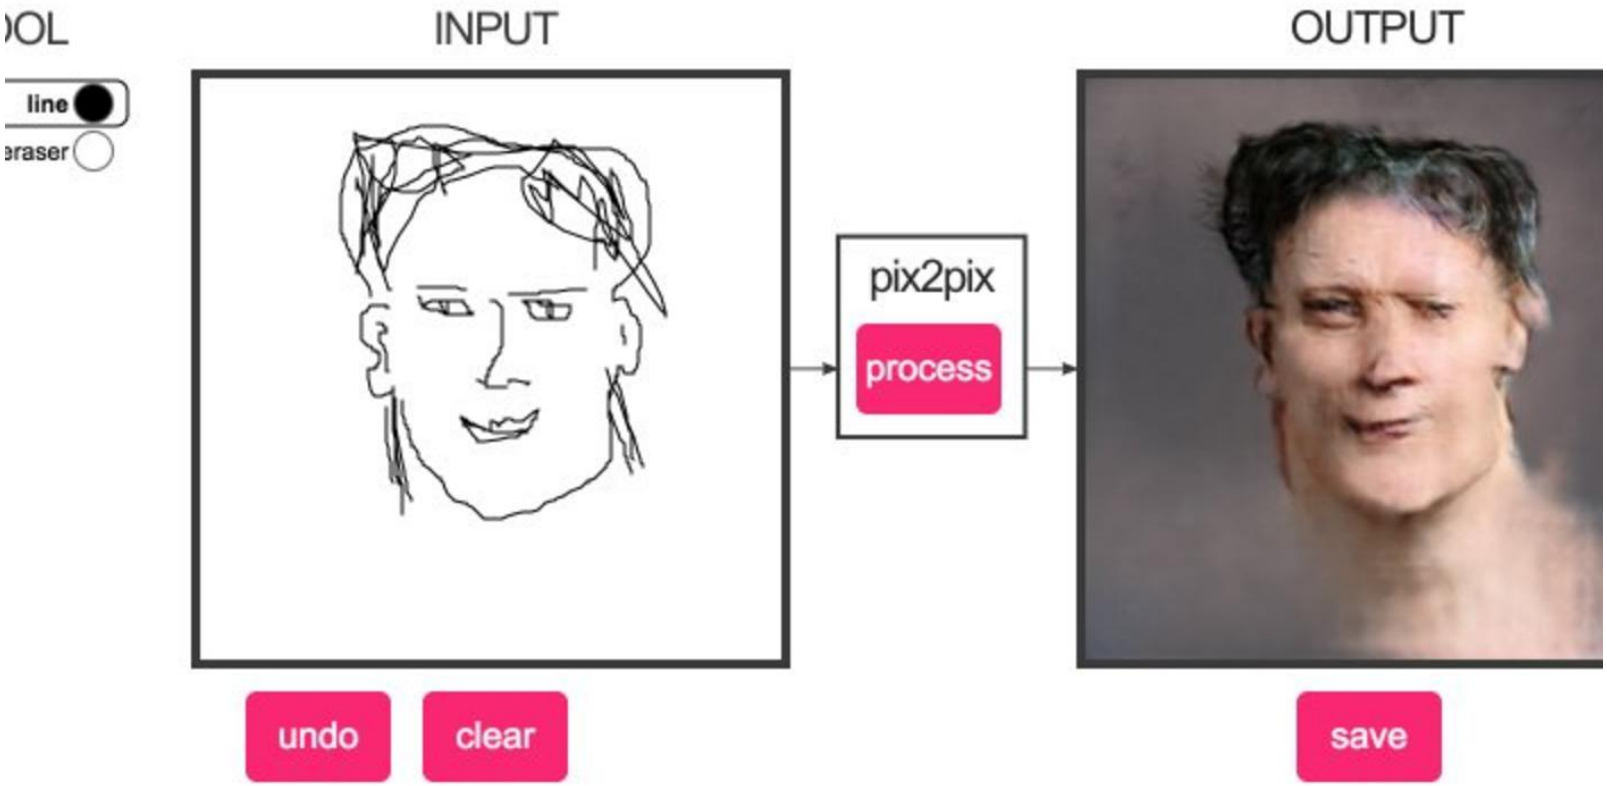
Zhu et al. (2017)



https://junyanz.github.io/CycleGAN

pix2pix

Isola et al. (2017)



https:

StackGAN

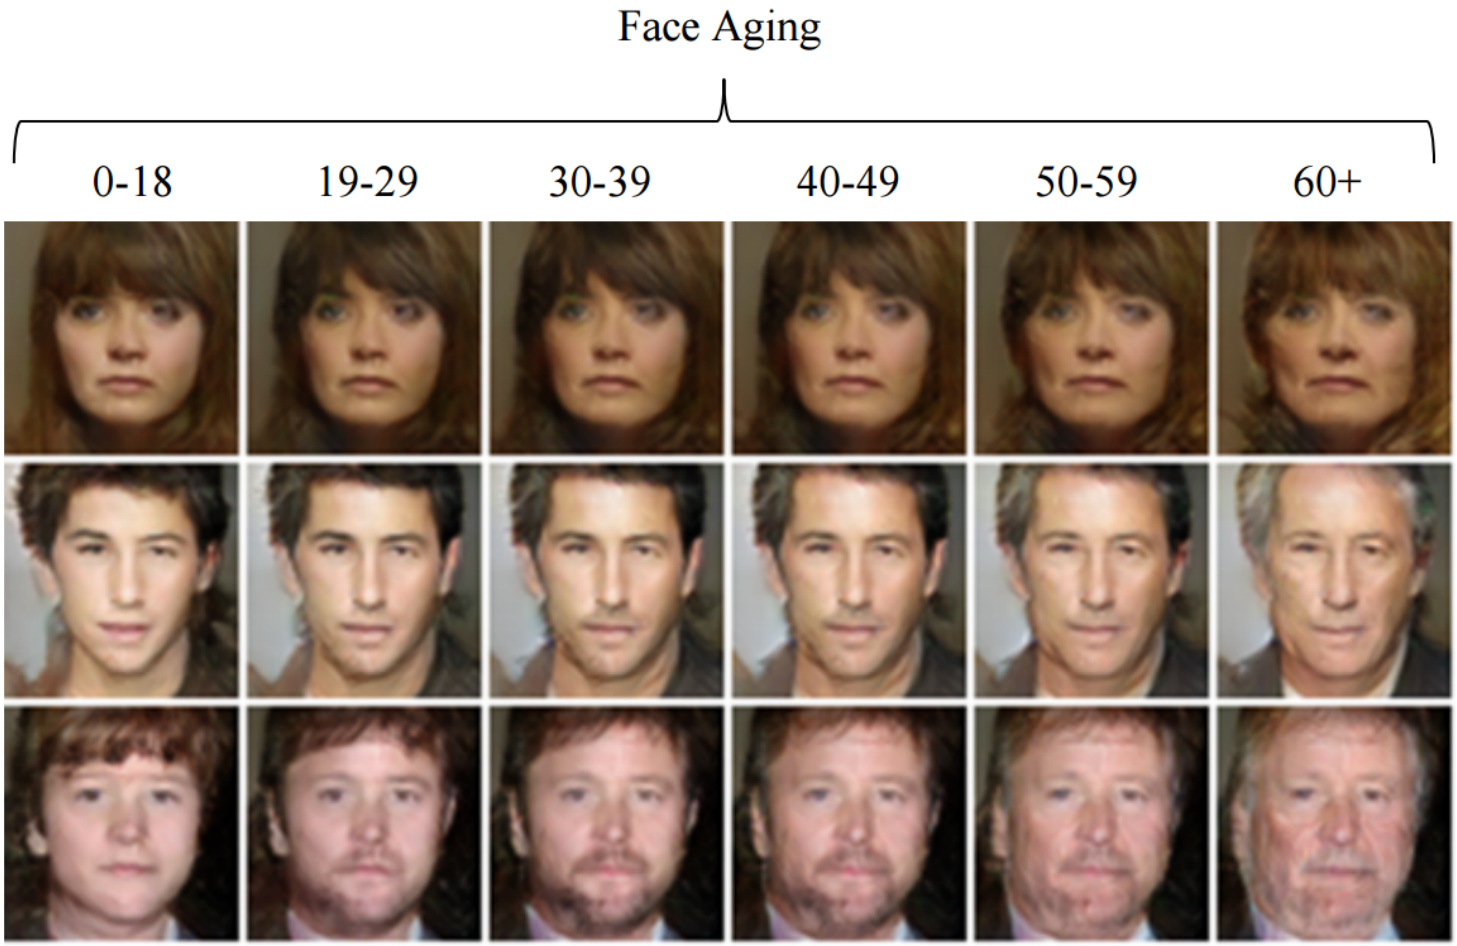
Zhang et al. (2017)

Figure 3. Example results by our proposed StackGAN, GAWWN [20], and GAN-INT-CLS [22] conditioned on text descriptions from CUB test set. GAWWN and GAN-INT-CLS generate 16 images for each text description, respectively. We select the best one for each of them to compare with our StackGAN.

[Which Face is Real?]

[“celebrity” latent-space interpolation]

Latent-Space Interpolation



Use Cases

- [make $ selling art :)]
- simulate data, e.g., for training autonomous vehicles
- speed fashion/architectural design
- [artificial intelligence augmentation (AIA)]
- enable machines to be creative
