DAILY NEWS 22 November 2016

Google's DeepMind agrees new deal to share NHS patient data

Phone alerts could save lives
Jose Luis Pelaez Inc/Getty

By Victoria Turk

Google's DeepMind has announced a five-year agreement with a UK National Health Service (NHS) trust that will give it access to patient data to develop and deploy its healthcare app, Streams.

The screenshot shows a web browser window with the address bar displaying 'www.jonkrohn.com/resources/'. The page content is organized into several sections:

- Deep Learning**: A section titled 'Deep Learning' with a sub-section 'First Steps' that mentions a 'Deep Learning Study Group' and lists two resources: a sequence of courses by Greg Brockman and a more comprehensive introductory resource by Ofir Press.
- Textbooks**: A section titled 'Textbooks' that lists two resources: Michael Nielsen's e-book 'Neural Networks and Deep Learning' and an in-progress textbook by Goodfellow, Bengio, and Courville.
- Interactive Demos**: A section titled 'Interactive Demos' that lists two resources: Chris Olah and the illustrious Andrej Karpathy.
- Applications**: A section titled 'Applications' that lists two resources: Flood Sung's roadmap for deep learning papers and Adit Deshpande's list of nine key papers.
- Academic Papers**: A section titled 'Academic Papers' that lists two resources: this thorough, subcategorized reading list and Karpathy's arXiv Sanity Preserver.

On the left side of the page, there is a circular profile picture of Jon Krohn with the text 'HOP' next to it, and a list of navigation links: Home, Posts, Resources, Publications, Talks, and Applications. Below these links are several categories: Academia, Photography, Quotations, and Contact.

The screenshot shows a web browser window with the URL `https://codelabs.developers.google.com/codelabs/tensorflow-for-poets/#0`. The page title is "TensorFlow For Poets" and it shows a timer for "37 min remaining". On the left, a table of contents lists 8 steps, with "1 Introduction" selected. The main content area displays the text for the introduction section.

1 Introduction

2 Setting Up

3 Retrieving the images

4 (Re)training Inception

5 Using the Retrained Model

6 Optional Step: Trying Other Hyperparameters

7 Optional Step: Training on Your Own Categories

8 Next Steps

1. Introduction

[TensorFlow](#) is an open source library for numerical computation, specializing in machine learning applications. In this codelab, you will learn how to install and run TensorFlow on a single machine, and will train a simple classifier to classify images of flowers.

What are we going to be building?

In this lab, we will be using transfer learning, which means we are starting with a model that has been already trained on another problem. We will then be retraining it on a similar problem. Deep learning from scratch can take days, but transfer learning can be done in short order.

We are going to use the Inception v3 network. Inception v3 is trained for the [ImageNet Large Visual Recognition Challenge](#) using the data from 2012, and it can differentiate between 1,000 different classes, like Dalmatian or dishwasher. We will use this same network, but retrain it to tell apart a small number of classes based on our own exa

- Neural Nets
- Deep Neural Nets

Application

- ConvNets
- LSTMs
- untapt
- Reinforcement
- Building Blocks

The Future

Number of world citizens living under different political regimes

The Polity IV score captures the type of political regime for each country on a range from -10 (full autocracy) to +10 (full democracy). Regimes that fall into the middle of this spectrum are called anocracies.

Data source: World Population by Political Regime they live in (by Our World In Data)

- ConvNets
- LSTMs
- untapt
- Reinforcement
- Building Blocks

The Future

Global child mortality, 1800 to 2015

Share of the world population dying and surviving the first 5 years of life.

Data source: Global child mortality (since 1800) based on Gapminder and World Bank
